

# JULIAN COLLINS

I have a twenty year career as a data professional, working with both official financial statistics and healthcare data. Most recently I designed and developed a data warehouse of linked healthcare data for 250k patients<sup>1</sup> at a group of major NHS Trusts in London.

My expertise lies in uncovering meaning in data - to drive forward quality improvements and to tell stories<sup>2</sup> that can make a difference.

Currently looking for a position in healthcare analytics that allows me to exploit and develop my skills in R, data quality development, statistical analysis and visualisation.

## INDUSTRY EXPERIENCE

2019  
|  
2014

### ● Data Manager

King's Health Partners AHSN

📍 London, UK

- Designed and developed a data warehouse within MS-SQL Server, for diabetes care within the King's Health Partners (AHSN) Institute for Diabetes, Endocrinology and Obesity, linking patient-level data from more than twenty data sources, drawn from GSTT and KCH Foundation Trusts, Primary Care, Community Services and public sources. This pseudo-nymised data covered 250k people with diabetes, with tens of millions of observations.
- Using data pipeline SQL Server > R > Rmarkdown, produced a wide range of data and reports relating to the healthcare and outcomes of people with diabetes, including:
- **cohort** studies investigating renal disease progression; ethnic variation in eye complications; diabetes outcomes in patients with prostate cancer
- **population** studies highlighting variation in care and outcomes linked to deprivation/ethnicity/age, co-morbidities and service usage
- **audits** into clinical services, medication reviews, NICE guidelines compliance
- compiled National Diabetes Audit return for GSTT, enabling the trust to participate for the first time and successfully bringing together multiple sources to provide a detailed data picture that highlighted the excellent outcomes being delivered to Type 1 patients.
- Collaborated with/presented to external, including international, partners of the AHSN (pharmaceutical and medical device companies, AI data consultants) highlighting the data warehouse outputs.
- Regular, routine experience of home-working, including managing projects and teams remotely.

2012

### ● Data Analyst

GSTT NHS Foundation Trust

📍 London, UK

- The Diabetes Modernisation Initiative was a multi-year programme which brought together acute trusts, primary care, CCGs, community services and patient groups to improve health outcomes and services for people with diabetes in Lambeth and Southwark.
- Worked with programme leads to design a range of dashboards and storyboards that monitored monthly progress against projects goals and KPIs and drove activity. Designed bespoke monthly programme storyboard that focussed on current priorities, highlighting areas for discussion, and items of particular success or concern.

*I think that a code-based approach to analysis is essential for transparency and reproducibility - it also empowers teams to collaborate effectively. A data pipeline of Source > R > Rmarkdown is ideal.*

## LANGUAGE / SOFTWARE

Made with the R package [pagedown](#)

### Sector Statistician

Office for National Statistics

📍 London, UK

- Led a team of analysts compiling and publishing statistics relating to corporate activity on a quarterly and annual basis. Main outputs were sectoral data for quarterly/annual GDP and quarterly profitability publication.
- In addition to technical tasks relating to data compilation and consistency checking, this role required a range of research and analytical work to be conducted in order to understand trends at sector, sub-sector and business levels. Research activities would include working with the Business Survey teams to understand sampling frames and company response rates; confronting survey data with a range of other sources; analysing published corporate accounts; monitoring trade press.
- Explained data movements to a range of users, including national financial journalists (e.g. FT, BBC, Guardian) and discussing with expert customers such as Bank of England Monetary Policy Committee analysts.

2008  
|  
2007

### Publications Manager

Office for National Statistics

📍 London, UK

- Led a team compiling regional and local breakdowns of GVA and Household Income. These data were used to calculate UK structural funds allocations from the EU.

2007  
|  
2001

### Statistical Analyst

Office for National Statistics

📍 London, UK

- Data compilation and analysis for UK Balance of Payments
- I represented the UK on a joint EU/ECB task force investigating data coherence and consistency across data frameworks and member states.

## EDUCATION

1998  
|  
1994

### MA Hons Geography 2:1

University of St. Andrews

📍 Fife, UK

- honours studies included statistics and GIS
- sub-honours studies in psychology, social anthropology and medieval history

## OTHER DATA SCIENCE

2020  
|  
2019

### TidyTuesday' data visualisation challenge

<https://nsgrantham.shinyapps.io/tidyuesdayrocks/>

- Twitter community participating in weekly data visualisation challenge.
- Filter by User = 'JCollinsData'

2019  
|  
2018

### Authored internal-use R package 'rIDEO'

<https://github.com/KHP-IDEO/rIDEO>

- Suite of functions to parse and categorise various data for people with diabetes

*I favour the tidyverse packages within R, whilst always remaining open to other approaches.*
